

Agentic AI  
Foundation

# AAIF Hosted Projects

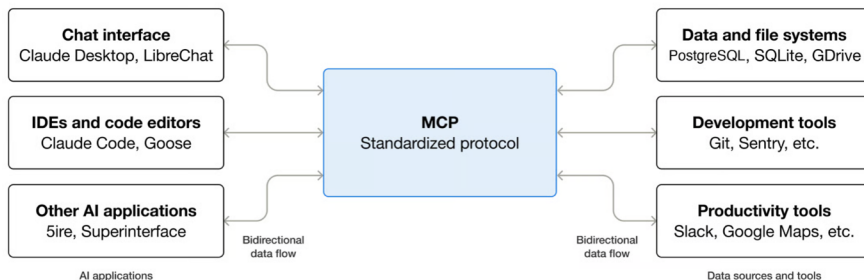

THE AAIF COMMUNITY SERIES - Seoul

**Hoon Jo** | CNCF & AAIF Ambassador

# Core Projects Showcase - **MCP** & 7-28 Release

> A protocol for seamless integration between LLM apps and external data sources

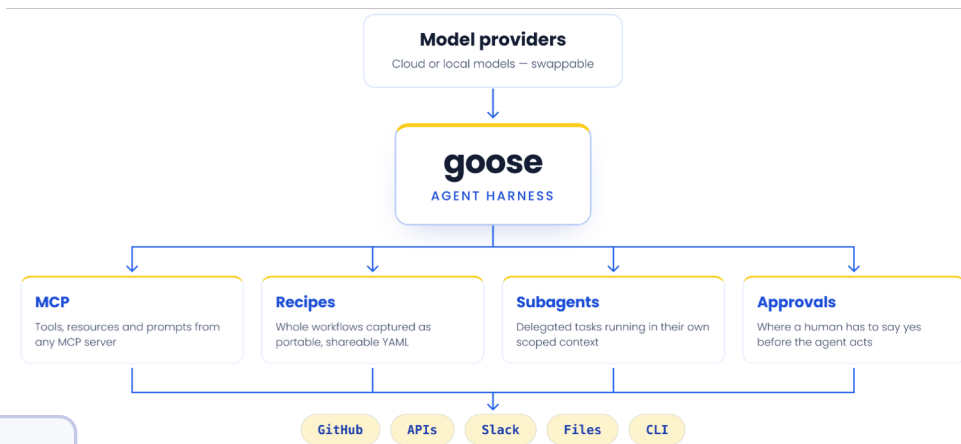

- Stateless Core
- Standardized HTTP & Headers
- First-Class Extensions
- Hardened Authorization

# Core Projects Showcase - **Goose**

> Open implementation of an agent harness. Connects models, tools, MCP servers, etc

- Multi-model runtime (local / hosted)
- MCP-native tool integration
- Recipes and reusable workflows
- Subagents for parallel task execution
- Human approvals and security controls
- Desktop, CLI and API interfaces

You can check my hands-on with Goose experiment in [this article](#)

# Core Projects Showcase - **AGENTS.md**

> A simple, open format for guiding coding agents

One agent: a rename.

Three agents: one source of truth,  
not three that disagree.

**I measured the switch:**  
**210 runs, 5 models. No penalty.**

60,000+ repos, 28+ agents read it natively.

Method and numbers: [kuberneteslab.dev/en/blog/agents-md-migration](https://kuberneteslab.dev/en/blog/agents-md-migration)

**The whole migration:** `git mv CLAUDE.md AGENTS.md` then one `@AGENTS.md` line in `CLAUDE.md`

# Core Projects Showcase - **agentgateway**

> One gateway for AI agents, models, and tools.

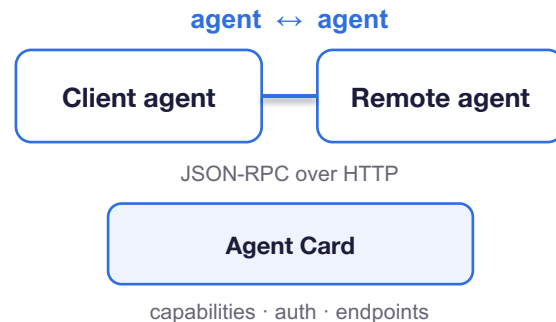

- **Connect through MCP and A2A protocol**  
Link agents to tools, data sources, and other agents
- **Route across LLM providers**  
Use OpenAI-compatible API for multiple providers
- **Run & route models anywhere**  
Support cloud, k8s & self-hosted model deployments
- **Secure every connection**  
Use OAuth, API keys, JWT, access policies, and TLS
- **See & govern agent traffic**  
Get metrics, logs, traces, budget controls, and content guardrails

# Core Projects Showcase - **A2A** (New!)

> Open protocol that enables AI agents to communicate, collaborate, and securely exchange information and tasks across platforms and frameworks

- **Discover through Agent Cards**  
Capabilities and auth at a well-known URL
- **Built on standards you run**  
HTTP, JSON-RPC and Server-Sent Events
- **Handle long-running work**  
Streaming and push notifications
- **Keep agents opaque**  
No internal state or tools exposed
- **Complements MCP**  
MCP: agents to tools. A2A: agents to agents
- **Newest AAIF hosted project**
